

**CARB-OFF IS A SYSTEM CLEANER PRESCRIBED FOR QUICK AND EASY REMOVAL OF SLUDGE AND CARBON FROM HEAT TRANSFER SYSTEMS**

**OVERVIEW**

Carb-off is recommended by major equipment OEMs. The fast-acting formulation makes it perfect for stripping fouled heat transfer systems of oxidized and thermally degraded oil deposits. It will generally clean moderately to severely fouled systems in a few hours.

A high performance, fast acting and high flash point terpene solvent. A unique combination of terpene alcohols, penetrants, and surfactants designed to remove grease, oil, and carbon deposits. Systems must not operate at temperatures above 150°F while using **Carb-Off**.

**Carb-Off** is based on terpenes, a naturally occurring ten carbon molecule present almost everywhere in nature. The pine tree, when pulped for paper manufacturing, is the most abundant source of terpenes. **Carb-Off** is an environmentally safe, low toxicity, biodegradable, and renewable natural source.

Appearance	Clear
Color (Apha)	Max 50
Flash Point (T.C.C.)	183°F
Specific Gravity	0.927
Odor	Pine-Type
